

Covering note to accompany the V5C form for vehicle P798 UGH to re-classify body type as "Motor Caravan".

I have converted this Panel Van into a Motor Caravan, side windows have been added as well as a sunroof.

The van has a separate 12v leisure battery for powering lighting and other ancillaries. A 240v Hookup has also been installed for use on campsites.

A 2 burner Hob has been fitted supplied from a gas bottle in storage cupboard. Water storage is via a container also in storage cupboard.

Both front seats swivel to face rearwards for more space while camping and a rear double seat which also extends to a double bed is in the rear.
